01 · PROBLEM STATEMENT

# Fake bKash and Nagad messages cost Bangladeshi families real money every day

### Scams arrive by SMS and Messenger

Fake “wrong sends”, OTP and PIN requests, job offers with a fee, lottery wins and phishing links.

### The most at-risk have the least help

Parents and grandparents rarely get plain-language warnings, in Bangla, before they reply.

### After a mistake, people freeze

Victims don't know who to call first or how to stop the next follow-up scam.

**Messages people really get**

**bKash**
You received Tk 5,000 by mistake. Return it now or your account will be closed.

**+8801XXXXXXXXX**
Your Nagad OTP is needed to verify your account. Share the code to avoid suspension.

**HR Jobs BD**
Selected! Salary Tk 45,000. Pay Tk 1,500 registration fee to confirm.

**Lucky Draw**
Congrats! You won an iPhone. Pay the courier charge to claim.

02 · PROPOSED SOLUTION

# ScamShield BD: a free AI scam checker and recovery assistant

*Spot the scam before it costs you, and recover fast if it already has.*

### Check

Paste a message or upload a screenshot. Get a verdict, risk score and the exact red flags.

### Practice

An AI game of realistic messages. Guess scam or genuine and learn the warning signs.

### Get Help

Already replied? Get a personal recovery plan and ask follow-up questions.

**English and Bangla**

**Free, no sign-up**

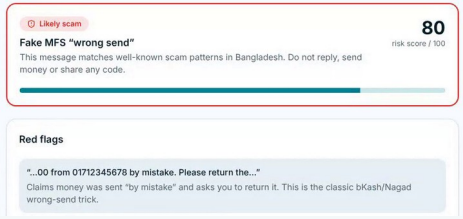

**Mobile-first web app**

03 · HOW THE SOLUTION WORKS

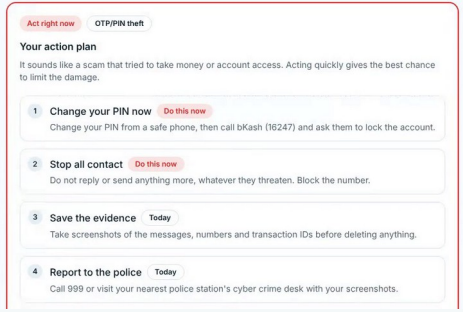

# Three flows, one AI brain

| | | | |
|---|---|---|---|
| **Check** | Paste text or a screenshot | AI verdict + risk score | Red flags, next steps, share to family, explain in Bangla |
| **Practice** | AI writes a realistic message | You guess: scam or genuine | Instant feedback on the red flags |
| **Get Help** | Describe what happened | Personal recovery plan, urgency, who to report to | Follow-up Q&A grounded in your own case |

**Under the hood:** server functions call Gemini Flash (checks, practice) and GPT (recovery plans) through the Lovable AI Gateway, with a rule-based Bangladesh scam-pattern checker as fallback when the AI is busy.

Check: verdict and risk score

Get Help: prioritised action plan

04 · PARTICIPANT INTRODUCTION

# A solo build, end to end

## Najmun Nahar

Solo participant · Builder of ScamShield BD

github.com/najmunnaharhira

scamshield.najmunnaharhira.me

### Product and research

Mapped the scams most used in Bangladesh and the helplines people need.

### Design

Simple, mobile-first screens with a full Bangla toggle for every family member.

### AI engineering

Prompts and structured outputs for checking, practice and recovery plans.

### Full-stack development

TanStack Start and React app, Supabase reports, PWA, deployment and demo video.

05 · OTHER RELEVANT INFORMATION

# Safe by design, ready for real families

## Private and reliable

- Nothing you check is stored on a server
- Check history stays on your own device
- Rule-based quick check when the AI is busy

## Built for everyone

- Every screen in English and Bangla
- Installable PWA for mobile and desktop
- One-tap warning to share on WhatsApp

## Community and safety

- Report a scam sender; see how often it was reported
- Helplines up front: bKash 16247, Nagad 16167, 999
- Golden rules and six common scam types
